Illustrated Wildlife Talks

The Talk:

My talks are designed to last a 'standard' meeting of two halves, each half taking around 30-40 minutes to deliver. This should be taken as a guide only - I am able to adjust the talks to suit your requirements.

Distance & Times:

I will normally travel within a 100-mile radius of Wareham, in Dorset, but would consider travelling further a field. I am available to attend morning, afternoon or evening meetings and can take bookings well in advance to allow you to draw up your programme.

Charges:

My charges for the talks depend on a number of variables so the cost of each talk will be individually advised. The price quoted will be inclusive of my travel and time. No deposit is required on confirmation of a booking but payment should be made on the day either by cash or a cheque made out to N. Gartshore.

As part of my charges I would expect to bring along both publicity material to promote my birding and wildlife guiding service and a small selection of natural history books that I sell through my other business, Calluna Books.

Equipment:

My current talks are a mixture of slide and power point presentations, for which I have my own equipment. If possible though, I would prefer to use equipment available at the venue (especially a screen and a projector table). Equipment requirements will be discussed on confirmation of your booking.

Short Notice:

I am happy to stand in at short notice if one of your booked speakers pulls out (subject to being available).

Confirmation:

When you confirm a booking please send me details of how to get to the venue (if I am unfamiliar with it). I will contact you a week or so before the talk to make sure that the arrangements are okay.

NATURAL HISTORY BOOKS

TALKS

Dorset's Best Birdwatching Sites [power point]

In 2002 Norfolk became the first guide to be published by Buckingham Press in its Best Birdwatching Sites series. The publisher's aim was to produce a guide that was more user-friendly compared to others on the market at the time. Six titles down the line it was now Dorset's turn to get the BBS treatment and I was asked to write it. This talk looks at the design and layout of the series and what was involved in writing it before taking a trip around some of the sites and looking at the birds that make them the 'best' sites.

Poole Harbour and its Birds [power point]

Poole Harbour is the largest natural harbour in the UK and is one of the largest in the world. Its international importance is recognised by the designations afforded it. From the rivers Frome and Piddle to the open sea, the harbour and its adjacent shores has a variety of habitats including reed beds, salt marsh, heathland and grassland providing for a wide range of bird species (many of which reach internationally important numbers). Human activity in the Harbour can often be in conflict with this wildlife interest - this talk looks at some of these issues, the wildlife and the beauty of this outstanding area.

Japan: Birding in the Land of the Rising Sun [power point][#]

Japan sits in the Palearctic region, the same as the UK, and so provides both familiar and unfamiliar species for the visiting UK bird watcher... these include magnificent eagles and graceful cranes. Together with a very different culture, any trip to the country will be an experience. This talk is a compilation of a number of visits over a period of 15 years and shares the experiences of Japanese culture and the country's interesting birdlife.

[[#]For non-natural history groups I give a slightly modified version of this talk using the title 'A Birdwatcher in Japan'.]

Birding in Spain: Marshes, Mountain and Migration [power point]

Ornithological interest in Spain dates back to the Victorian days and today the country is a popular birding destination amongst British birdwatchers. Over many years now I have been taking groups to the Coto Donana and Extremadura areas of the country and, more recently, to the Strait of Gibraltar area. With an interesting mixture of wetlands, open grasslands, mountains and forests, spring and autumn trips do not disappoint with an array of colourful birds and an abundance of birds of prey and wetland birds - many of the birds we consider 'rare' in the UK are common place here. This talk gives a taste of what to expect.

A Sub-Antarctic Experience: the Prince Edward Islands [slides]

Between Antarctica and the African continent are the Prince Edward Islands, one of a number of Sub-Antarctic island groups found around the southern hemisphere. In 1986/1987, I was employed by the Percy Fitzpatrick Institute for African Ornithology, through the University of Cape Town, as a field research assistant on this South African possession to collect data on giant petrels, Sub-Antarctic skua and a variety of albatross species. This talk looks at the island's history, its wildlife and my work on the islands.

Wildlife Wanderings in South Africa [slides]

My first experience of a 'big trip' abroad was to South Africa in 1984/85. South Africa is often described as 'a world in one country' with the game parks of Kwa-zulu/Natal & the Transvaal; the Cape coast; the Drakensberg mountains; the arid Karoo; and the unique Fynbos playing host to a wonderful variety of birds and mammals. South Africa was so much of an experience that I have revisited many times since 1984/85. This talk is a compilation of these trips looking at some of the country's landscapes, birds and mammals.

The Farne Islands: Northumberland's Seabird City [slides]

A visit to a seabird colony is a wonderful experience for the bird watcher, particularly for the first time. The Farne Islands, owned by the National Trust, is one of the best seabird sites in the UK. With fourteen species of breeding seabirds and a further 150 species of birds recorded during the year there is always something to see. A large colony of grey seals breed on the islands from late-October through to early December and the islands have a historical interest dating back over 1500 years. This talk combines my experiences of four seasons working as a warden on the islands in the 1980's.

Heathlands: their wildlife and management [power point]

Lowland heath, dominated by *Calluna vulgaris*, is restricted to Western Europe and has long been a habitat in decline. The UK has lost three quarters of its heathland over the last 300 years and now holds just over 20% of the world's remaining heathland resource. This man-made habitat has developed a diversity of special flora & fauna and requires active management for its survival. The talk looks (largely in a Dorset context) at why heathlands are so special, their flora and fauna, the reasons for their decline and how they are managed today. [a shorter talk]

*** Birds and Books [power point, in prep]**

Back in 1970 I received my first bird books – four titles published by Ladybird – these were that catalyst for a life-long obsession with birds and birdwatching. By 1983, and working in the conservation field, my book buying activities had expanded somewhat. By 1997 I had started buying and selling natural history books, trading under the name of Calluna Books. This talk looks at some of the many bird books published since the 1800's, many of them milestones in our ornithological knowledge. Subject areas include field guides, handbooks, county avifauna, monographs and bird art.

An Introduction to Bird Watching

We can provide a course for those new to bird watching or for those who feel that they would like a little more advice. The course can be run for interested groups with a minimum of ten / maximum of 20 participants. Please ask for details.

Dorset Birding & Wildlife Guides

I am able to offer a birding and wildlife guiding service to individuals or groups visiting Dorset in search of birds and other natural history. Bookings can be taken for half-days (min.) or full days. Please ask for details.
